By-Pass Kit for Fast Float Evo

The By-Pass Kit has been especially developed and tested for use in combination with the Fast Float Evo system for automatic filling of water tanks.

The Fast Float Evo used with the By-Pass Kit is the most complete and efficient drinking water management system on the market today. The system is designed to minimise waste and maximise efficiency and hydraulic comfort for the end user.

In addition to the well-known functions of the Fast Float Evo, the use of the By-Pass Kit further improves the management of the domestic plumbing system with the addition of the following functions:

1) Selecting the main hydraulic supply between the mains water supply and the automatic pumping system.

This selector is useful in the event of a temporary interruption of power supply to the automatic pumping system or when it is shut down due to failure or maintenance.

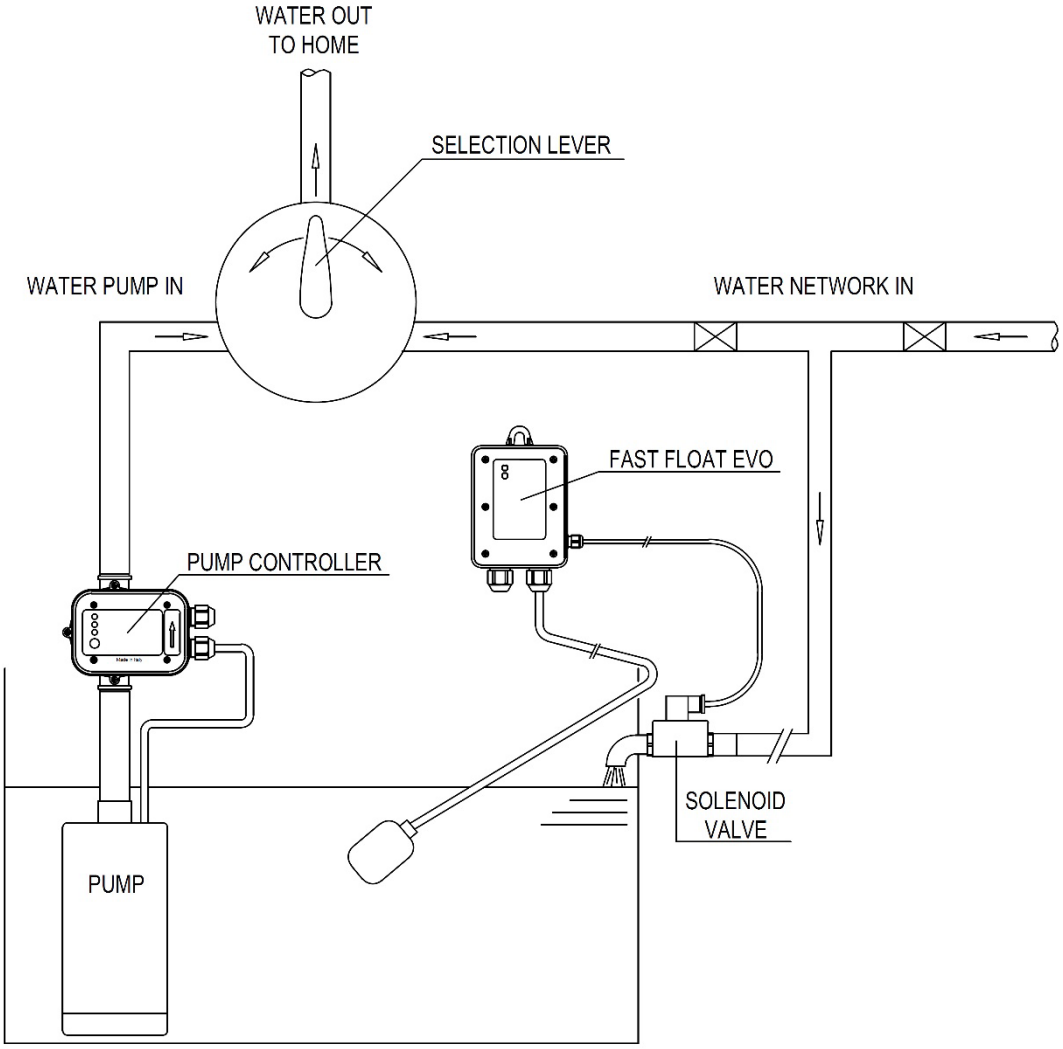
2) Rapid opening and closing of the supply of water to the house.

Useful in the event of a hydraulic failure to quickly stop the water outflow or to carry out maintenance.

Installation

Install the device as shown in the figure below:

BY-PASS KIT FOR FAST FLOAT EVO



LEVER TO LEFT SIDE	=	WATER FROM AUTOMATIC PUMP SYSTEM
LEVER TO RIGHT SIDE	=	WATER FROM WATER NETWORK
LEVER TO UP	=	SYSTEM CLOSE
LEVER TO DOWN	=	SYSTEM OPEN

FEMALE CONNECTIONS	=	WATER NETWORK 3/4"
		PUMP SYSTEM 3/4"
		TO HOME 3/4"
